

EXAMPLE TCVMD WATER SYSTEM

Curb Stop

Meter Pit

Customer Stop and Waste Valve

From the main water pipeline to your house, you should have the following on your property:
curb stop – meter pit – customer stop and waste valve

The yard hydrant is optional, you can use a regular hose bib. We require that the curb stop, meter pit, and stop and waste valve be 3" above final grade. Anything beyond the meter pit is the responsibility of the property owner.

Curb Stop: Should only be operated by District personnel. Tampering with or operating the curb stop may result in fines.

Meter Pit: Can be accessed by property owners with the appropriate tool, but all internal equipment can only be operated by District personnel. Tampering with internal equipment and/or damaging the meter pit by using incorrect tools may result in fines.

Customer Stop and Waste Valve: Used to turn on/off the property's irrigation water system. Operation and maintenance are the responsibility therefore we recommend hiring a professional. Incorrect operation can damage equipment and/or lead to leaks which will cause unexpectedly large water bills.

Please note that each property may be slightly different.
